

ENVIRONMENT — TEN HIGHEST GREENHOUSE GAS EMITTERS

3463. Mr C.J. Tallentire to the Minister for Environment:

- (1) For each of the last three years (financial or calendar), what are Western Australia's top ten industrial facility emitters of greenhouse gases?
- (2) For each facility outlined in (1):
 - (a) what is the emission from each facility as a percentage of Western Australia's total industrial emissions of greenhouse gases; and
 - (b) what is the emission amount in tonnes?

Mr A.P. Jacob replied:

- (1)–(2) Greenhouse gas emissions from industrial facilities are recorded by the Commonwealth Government through the National Greenhouse and Energy Reporting Scheme where corporations that control the operation of these facilities meet or exceed certain thresholds for a financial year. Further information regarding this matter is available through the Commonwealth Government's Clean Energy Regulator. The disclosure of information relating to individual facilities is restricted under the secrecy and disclosure of information provisions of the *Clean Energy Regulator Act 2011* and the *National Greenhouse and Energy Reporting Act 2007*.
