

PUBLIC

Attn : Ms Linda Omar
Legislative Council
Parliament House
PERTH WA 6000

Regarding the emissions from Cockburn cement Ltd we feel that it is affecting up in the following ways:

- 1) The odors at times are very strong and can sometimes be smelt throughout the house for hours.
- 2) The dust emissions (lime etc) covers everything including cars, windows and my color bond roof has deteriorated over the years due to the emissions . I have had an independent report done showing that this is caused by lime burning.
- 3) At times our eyes can burn breathing is difficult because of the smell
- 4) I have had livestock including goats die, I have never had any tests done but it is very unusual for the age of the livestock to die

Regarding my personal views on the actions taken by Cockburn Cement to address problems raised in the past is that they have not done enough to reduce emissions and it is absolutely ridiculous.

Sincerely
