Subject: Frack Free Geraldton

Nowhere in world-wide reports have I seen any redeeming factors in this obnoxious industry. We introduced many things into this landscape Over time and lived to regret it, i.e. cane toads, Patterson curse, G.M.F is the latest and already we have consequences . Generations of farmers –friends In court over contamination of crops. Farmers vs. Monsanto , farmers vs. Multi-billion dollar conglomerates! No contest. Guidelines? Farmer refuses entry to property. Conglomerates! See you in court!! Farmer morally, ethically right. Court legally wrong under exploration rules.

I shudder to think what we will leave our grandchildren if this industry is allowed to exist in this great land or for that matter anywhere in the world. Let's get our head out of the sand and see this industry for what it is.... A money grabbing behemoth and bugger the consequences.

Faithfully

Anthony Palmer
