**Subject:** Submissions Fracking for Unconventional Gas

Dear Margaret,

I put forward for your consideration my previous experience in the drilling industry relevant to the subject matter.

I was contracted to a local drilling company 2004-2006 in the position of "Rig air pack Operator Maintainer" with the responsibility of operating hydraulic fracking assets onsite to drill rigs in the Bowen Basin Queensland for well head Coal Seam Gas.

I believe I could have a roll to play for your concerned constituents in a "compliance roll"at the drilling operations site in as much I have hands on experience with the actual on site processes involved with Fracking, I would be in able to extrapolate & report on the actual fracking ingredients injected during the process & ensure the well head sealing & completion is carried out in a compliant manner.

I look forward in your response to this proposal and am able to supply support documents if requested.

Thanks

John Hakesley
