Subject: Fracking

Dear Members

As a concerned citizen I am against Fracking. The reasons being after researching, reading what has happened in other countries.

I.E. Contamination of ground water, seeing as Western Australia is reliant on ground water not a good idea as could poison a whole city , there by will be a major thing putting a strain on our already stretched Health system. Could also loose the water by drilling into a cavern (USA)

Birth defects have been detected in areas where fracking has taken place,(Karoo South Africa)

Ground poisoned cannot carry crops(USA)

Radiation has also been detected in areas where fracking has taken place which was not evident before.

Also could loose springs by drilling through the aqua into a caver there fore losing the water .

Yours
Faithfully
Ron Morris
