Subject: Fracking

Dear Committee,

I am most concerned at the commencement of fracking in Western Australia. The destruction of ground water sources due to chemical pollution and gas entering the natural water and pipe systems in the United States of America should be warning enough to totally disregard this process.

Surely nothing is more important in this country, on this planet, than maintaining and improving our fresh water quality. We can live without gas, we cannot live without clean water.

Surely developing sustainable energy production is far more sensible than fracking!

A big NO to fracking from me, for my grand children's well being and the future of our planet.

Sincerely Mary Sturmer
