# Welcome to the Western Australia Parliamentary Library Electorate Profiles

This site provides Census data based on the electoral boundaries current in Western Australia for the March 2021 state election.

#### New information from the 2021 Census is being progressively rolled out across this site.

The ABS has released two batches of data from the Australian 2021 Census since June 2022. Most Census-based topics on this community profile include 2021 data. The remaining topics are being updated progressively. Look for the orange indicators in the menu to see which topics have been updated. Read more about the Census.

Sign up for regular alerts on updates to this site. >>

The Western Australia Parliamentary Library Electorate Profiles provides demographic analysis for the State and smaller areas within it based on results from the 2021, 2016 and 2011 Censuses of Population and Housing. The profile is updated with population estimates when the Australian Bureau of Statistics (ABS) releases new figures.

### Population and dwellings

There are a number of different ways of measuring the population of an area, all of which give an insight into the size of the place and its rate of growth over different time periods. The Census counts people where they are on the night of the Census (enumerated population) and also by where they usually live (usual residence). Both these populations are useful and form the basis for a range of characteristics collected in the Census.

However, the most accurate count of the total population is Estimated Resident Population, which factors in an estimate of those missed in the Census and those who were overseas on Census night. It is usually higher than either Census count, and is also updated annually after the Census, providing preliminary estimates for up to 5 years.

This page provides the three population counts for Burns Beach at the last Census, with comparisons to previous Census years for the Census counts only. The current estimate for Burns Beach at the most recent year available is shown at the top of the page. This figure is a preliminary estimate only and is subject to review after the next Census data are released. Please use with caution.

Also included are a range of sub-population groups and key statistics from the Census (usual resident) population, such as citizens, employed persons and Indigenous population.

These figures all provide the context for the size of the population and growth rate within Burns Beach and should be looked at in conjunction with other basic demographic information, such as Age Structure, Dwelling Type and Household Size.

The data on this page are sourced from a variety of different tables and designed to give a range of population and dwelling numbers for the area.

### Population

| Burns Beach - Total persons   | 2021   |   |                           |        | Change |                           |                 |

Please refer to specific data notes for more information

\*Note that this is an estimate based on ERP at the SA1 level. It is subject to review after the next Census data release and may not match .id's population forecasts.

### Estimated Resident Population (ERP)

The Estimated Resident Population (ERP) is the Australian Bureau of Statistics' official 2021 population figure for all Local Government Areas (LGAs) - but is subject to review after the next Census release. For areas smaller than LGAs, the ERP is derived from SA1 geographies based on population distribution from the previous Census. As such, these smaller geographies are subject to a greater level of revision each Census due to the change in actual numbers and in population distributions.

Populations are counted and estimated in various ways. The most comprehensive population count available in Australia is derived from the Census of Population and Housing conducted by the Australian Bureau of Statistics every five years. However the Census count is generally an under-estimate of the actual population, due to people missed in the Census and people overseas on Census night. To provide a more accurate population figure more frequently, the ABS also produces ERP numbers.

See data notes for a detailed explanation of different population types, how they are calculated and when to use each one.

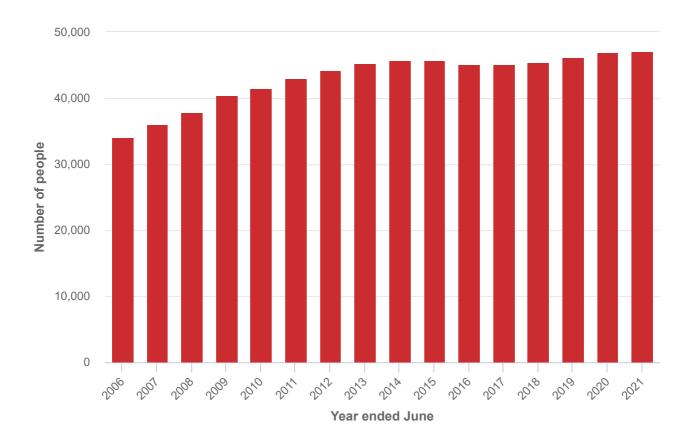

### **Estimated Resident Population (ERP)**

| Year (ending June 30) | Number | Change<br>in<br>number | Change<br>in<br>percent | Western<br>Australia<br>change<br>in<br>percent |
|-----------------------|--------|------------------------|-------------------------|---|
| 2006                  | 34,049 |                        |                         |   |

### Service age groups

The Age Structure of Burns Beach provides key insights into the level of demand for age based services and facilities such as child care. It is an indicator of Burns Beach's residential role and function and how it is likely to change in the future.

Service age groups divide the population into age categories that reflect typical life-stages. They indicate the level of demand for services that target people at different stages in life and how that demand is changing.

To get a more complete picture Burns Beach's Age Structure should be viewed in conjunction with Household Types and Dwelling Types.

### Dominant groups

Analysis of the service age groups of Burns Beach in 2021 compared to Western Australia shows that there was a higher proportion of people in the younger age groups (0 to 17 years) and a lower proportion of people in the older age groups (60+ years).

Overall, 24.1% of the population was aged between 0 and 17, and 16.9% were aged 60 years and over, compared with 22.6% and 21.8% respectively for Western Australia.

#### The major differences between the age structure of Burns Beach and Western Australia were:

- A *larger* percentage of 'Older workers & pre-retirees' (15.9% compared to 12.6%)
- A *larger* percentage of 'Tertiary education & independence' (9.8% compared to 8.2%)
- A *smaller* percentage of 'Seniors' (6.4% compared to 9.3%)
- A *smaller* percentage of 'Young workforce' (12.4% compared to 14.0%)

### **Emerging groups**

From 2016 to 2021, Burns Beach's population increased by 2,168 people (5.0%). This represents an average annual population change of 0.98% per year over the period.

The largest changes in the age structure in this area between 2016 and 2021 were in the age groups:

- Older workers and pre-retirees (50 to 59) (+1,289 people)
- Empty nesters and retirees (60 to 69) (+1,215 people)
- Seniors (70 to 84) (+1,036 people)
- Parents and homebuilders (35 to 49) (-995 people)

### Five year age groups

The Age Structure of Burns Beach provides key insights into the level of demand for age based services and facilities such as child care. It is also an indicator of Burns Beach's residential role and function and how it is likely to change in the future.

Five year age groups present a classic age profile of the population. Each age group covers exactly five years, which enables direct comparison between each group.

To get a more complete picture Burns Beach's Age Structure should be viewed in conjunction with Household Types and Dwelling Types.

### Dominant groups

Analysis of the five year age groups of Burns Beach in 2021 compared to Western Australia shows that there was a higher proportion of people in the younger age groups (under 15) and a lower proportion of people in the older age groups (65+).

Overall, 19.7% of the population was aged between 0 and 15, and 11.3% were aged 65 years and over, compared with 19.0% and 16.1% respectively for Western Australia.

#### The major differences between the age structure of Burns Beach and Western Australia were:

- A *larger* percentage of persons aged 50 to 54 (8.4% compared to 6.5%)
- A *larger* percentage of persons aged 15 to 19 (7.2% compared to 5.8%)
- A *larger* percentage of persons aged 55 to 59 (7.5% compared to 6.1%)
- A smaller percentage of persons aged 70 to 74 (3.1% compared to 4.3%)

### **Emerging groups**

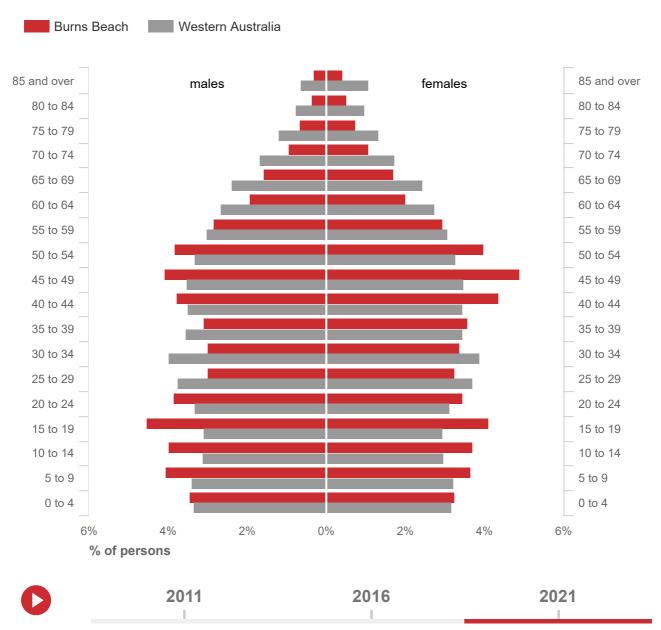

From 2016 to 2021, Burns Beach's population increased by 2,162 people (5.0%). This represents an average annual population change of 0.98% per year over the period.

The largest changes in age structure in this area between 2016 and 2021 were in the age groups:

- 55 to 59 (+907 persons)
- 60 to 64 (+839 persons)
- 40 to 44 (-569 persons)
- 70 to 74 (+546 persons)

### Age-sex pyramid

#### Age-sex pyramid, 2021

Source: Australian Bureau of Statistics, Census of Population and Housing, selected years between 1991-2021 (Enumerated data). Compiled and presented in profile.id by id (informed decisions).

The age-sex pyramid is a demographic tool which shows patterns of change in the age structure and sex ratio of an area over time. Its name comes from the traditional pyramid shape of an area which indicates a lot of children in large families, with a lower life expectancy and relatively few elderly. This shape is quite rare in developed nations like Australia. As nations and areas transition over time this shape turns into a column where there are less children a mix of ages including many elderly. Older areas with a lot of retirees or relatively few births may have a "reverse" pyramid formation where the largest proportion of the population is at the top of the chart. The sex ratio of males to females can also be seen - young areas are likely to have more males, while elderly areas generally have more females due to longer life expectancy.

The age-sex pyramid should be used in conjunction with **Household Types** and **Dwelling Types** information to build up a picture of who is living in the area and how it is changing over time.

### Ancestry

Ancestry defines the cultural association and ethnic background of an individual going back three generations. Ancestry is a good measure of the total size of cultural groups in Burns Beach regardless of where they were born or what language they speak.

Ancestry data, should be combined with data on Birthplace, Language Spoken at Home and Religion for a more complete picture of Burns Beach's ethnic characteristics.

Please note that the "Australian Aboriginal" and "Torres Strait Islander" categories in this topic are not directly comparable from 2021 to previous years, due to a change in the wording of the question. In 2021, these options were marked boxes on the question rather than write-in options. The "Aboriginal and Torres Strait Islander Origin" question is still considered a more reliable count for this group, and can be found on the **Population summary** page.

Please note: Due to changes in ABS rules around perturbation and additivity of data to protect the confidentiality of individuals, counts of ancestry groups and totals derived from them may differ slightly from those published by the ABS. For more information see notes on data confidentiality.

#### Change in ancestry, 2016 to 2021

**Burns Beach** 

Source: Australian Bureau of Statistics, Census of Population and Housing, 2016 and 2021 (Usual residence data). Compiled and presented in profile.id by .id (informed decisions).

### Dominant groups

Analysis of the ancestry responses of the population in Burns Beach in 2021 shows that the top five ancestries nominated were:

- English (21,497 people or 47.1%)
- Australian (11,540 people or 25.3%)
- Irish (4,847 people or 10.6%)
- Scottish (4,827 people or 10.6%)
- South African (1,687 people or 3.7%)

In combination these five ancestries account for 44,398 responses in total, or 97.35% of all responses.

#### The major differences between the ancestries of the population in Burns Beach and Western Australia were:

- A *larger* percentage of people with English ancestry (47.1% compared to 37.6%)
- A larger percentage of people with South African ancestry (3.7% compared to 1.3%)
- A *smaller* percentage of people with Australian ancestry (25.3% compared to 29.7%)
- A *smaller* percentage of people with Chinese ancestry (2.1% compared to 4.4%)

### **Emerging groups**

The largest changes in the reported ancestries of the population in this area between 2016 and 2021 were:

- English (+1,042 persons)
- Australian (+633 persons)
- Australian Aboriginal (+603 persons)
- Irish (+360 persons)

### **Birthplace**

Country of Birth data identifies where people were born and is indicative of the level of cultural diversity in Burns Beach. The mix of Country of Birth groups is also indicative of historical settlement patterns, as source countries for Australia's immigration program have varied significantly over time.

To get a more complete picture of cultural and ethnic characteristics, Burns Beach's Country of Birth data should be viewed together with Ancestry, Language Spoken at Home and Religion.

Please note: Due to changes in ABS rules around perturbation and additivity of data to protect the confidentiality of individuals, counts of individual birthplace groups and totals derived from them may differ slightly from those published by the ABS. For more information see notes on data confidentiality.

Source: Australian Bureau of Statistics, Census of Population and Housing, 2021 (Usual residence data). Compiled and presented in profile.id by id (informed decisions).

#### Change in birthplace, 2016 to 2021

**Burns Beach** 

Source: Australian Bureau of Statistics, Census of Population and Housing, 2016 and 2021 (Usual residence data). Compiled and presented in profile.id by .id (informed decisions).

### Dominant groups

Analysis of the country of birth of the population in Burns Beach in 2021 compared to Western Australia shows that there was a larger proportion of people born overseas.

Overall, 45.5% of the population was born overseas, compared with 32.2% for Western Australia.

The major differences between the countries of birth of the population in Burns Beach and Western Australia were:

- A larger percentage of people born in United Kingdom (22.6% compared to 8.9%)
- A *larger* percentage of people born in South Africa (5.3% compared to 1.7%)
- A *smaller* percentage of people born in India (0.9% compared to 2.3%)

### **Emerging groups**

Between 2016 and 2021, the number of people born overseas increased by 704 or 3.5%.

The largest changes in birthplace countries of the population in this area between 2016 and 2021 were for those born in:

- United Kingdom (+134 persons)
- New Zealand (-131 persons)
- Ireland (+118 persons)
- South Africa (+74 persons)

#### Overseas arrivals

The Year of Arrival data records when the overseas born population arrived in Australia. The data shows the degree to which areas are 'ports' for new overseas arrivals and reveals the role of Burns Beach in housing the overseas-born. The number of recent overseas arrivals in an area is often determined by housing affordability, employment opportunities and pre-existing communities located in the area.

Burns Beach's Year of Arrival data, when used with Birthplace, Religion and Language Spoken at Home data, is a good indicator of the likely need for services in migrant communities.

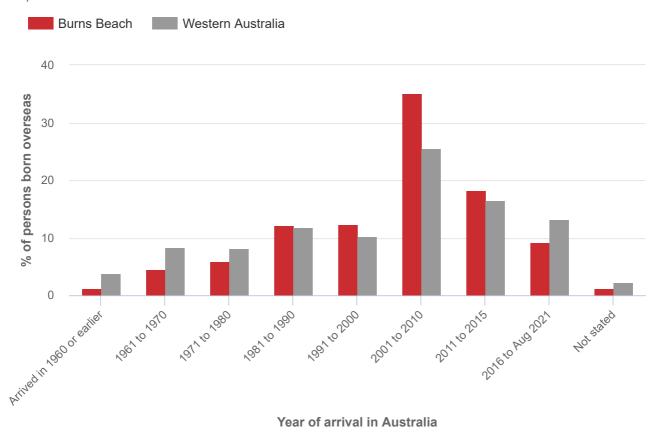

#### Overseas arrivals

#### Overseas arrivals, 2021

Total persons

Source: Australian Bureau of Statistics, Census of Population and Housing, 2021 (Usual residence data). Compiled and presented in profile.id by .id (informed decisions).

### Dominant groups

Analysis of the year of arrival for the overseas born population of Burns Beach in 2021 compared to Western Australia shows that there was a smaller proportion of people who arrived before 2001, as well as a smaller proportion of recent overseas arrivals (those who arrived between 2016 to Aug 2021).

Overall, 36.2% of the overseas born population arrived before 2001, and 9% arrived during or after 2016, compared with 42.4% and 13.2% respectively for Western Australia.

The major differences in year of arrival data in the population between Burns Beach and Western Australia are:

- A larger percentage of arrivals between 2001 to 2010 (35.1% compared to 25.5%)
- A smaller percentage of arrivals between 2016 to Aug 2021 (9.3% compared to 13.2%)
- A *smaller* percentage of arrivals between 1961 to 1970 (4.5% compared to 8.4%)
- A *smaller* percentage of arrivals between Arrived in 1960 or earlier (1.2% compared to 3.8%)

### Proficiency in English

Proficiency in English measures the self-assessed proficiency in spoken English of people who speak a language other than English at home. The data, when viewed with other ethnic and cultural indicators, such as Ancestry, Country of Birth, Language Spoken at Home and Religion, reflects Burns Beach's ethnic composition and how long the overseas born have been in Australia. This helps service providers determine whether they need to communicate with the local population in languages other than English.

### Proficiency in English

#### Change in Proficiency in English, 2016 to 2021

Burns Beach - Total persons

Source: Australian Bureau of Statistics, Census of Population and Housing, 2016 and 2021 (Usual residence data). Compiled and presented in profile.id by .id (informed decisions).

## Dominant groups

Analysis of the proficiency in English data of the population in Burns Beach in 2021 compared to Western Australia shows that there was a higher proportion of people who spoke English only, and a lower proportion of people who spoke another language and English not well or not at all.

Overall, 82.4% of people spoke English only, and 1.3% spoke another language and English not well or not at all, compared with 75.3% and 2.3% respectively for Western Australia.

## **Emerging groups**

The most significant changes in the proficiency in English of the population in this area between 2016 and 2021 were in those speaking:

- Speaks English only (+2,201 persons)
- Speaks another language, and English well or very well (+235 persons)

## Language spoken at home

Burns Beach's language statistics show the proportion of the population who speak a language at home other than English. They indicate how culturally diverse a population is and the degree to which different ethnic groups and nationalities are retaining their language.

Burns Beach's language statistics should be analysed in conjunction with Country of Birth and Proficiency in English to assist in identifying specific cultural and ethnic groups in the area and the services required by the multicultural community.

Please note: Due to ABS rules regarding perturbation of data to protect the confidentiality of individuals, counts of individual language groups and totals derived from them may differ slightly from those published by the ABS.

#### Change in language spoken at home, 2016 to 2021

**Burns Beach** 

Source: Australian Bureau of Statistics, Census of Population and Housing, 2016 and 2021 (Usual residence data). Compiled and presented in profile.id by .id (informed decisions).

## Dominant groups

Analysis of the language spoken at home by the population of Burns Beach in 2021 compared to Western Australia shows that there was a larger proportion of people who spoke English only, and a smaller proportion of those speaking a non-English language (either exclusively, or in addition to English).

Overall, 82.4% of the population spoke English only, and 13.5% spoke a non-English language, compared with 75.3% and 18.4% respectively for Western Australia.

The dominant language spoken at home, other than English, in Burns Beach was Afrikaans, with 2.3% of the population, or 1,045 people speaking this language at home.

The major differences between the languages spoken at home for the population of Burns Beach and Western Australia in 2021 were:

- A *larger* percentage speaking Afrikaans at home (2.3% compared to 0.6%)
- A *smaller* percentage speaking Mandarin at home (0.9% compared to 1.9%)

# **Emerging groups**

Between 2016 and 2021, the number of people who spoke a language other than English at home increased by 217 or 3.7%, and the number of people who spoke English only increased by 2,201 or 6.2%.

The largest changes in the spoken languages of the population in Burns Beach between 2016 and 2021 were for those speaking:

- Afrikaans (-112 persons)
- Punjabi (+67 persons)
- Persian (+54 persons)

## Religion

Burns Beach's religion statistics provide an indicator of cultural identity and ethnicity when observed in conjunction with other key variables. Religion data reveal the major concentrations of religions as well as revealing the proportion of people with no religious affiliation. There are a number of reasons for different religious compositions across areas including the country of birth and ethnic background of the population, the age of the population (belief in religion is generally stronger, the older the population) and changes in values and belief systems.

Burns Beach's religion statistics should be analysed in conjunction with other ethnicity statistics such as Country of Birth data and Language Spoken data to assist in identifying specific cultural and ethnic groups.

Please note: Due to changes in ABS rules around perturbation and additivity of data to protect the confidentiality of individuals, counts of individual religion groups and totals derived from them may differ slightly from those published by the ABS.

## Dominant groups

Analysis of the religious affiliation of the population of Burns Beach in 2021 compared to Western Australia shows that there was a similar proportion of people who professed a religion and a higher proportion who stated they had no religion.

Overall, 48.8% of the population nominated a religion, and 45.3% said they had no religion, compared with 49.1% and 42.8% respectively for Western Australia.

The largest single religion in Burns Beach was Western (Roman) Catholic, with 17.8% of the population or 8,113 people as adherents.

The major differences between the religious affiliation for the population of Burns Beach and Western Australia were:

- A *larger* percentage who nominated Anglican (13.2% compared to 10.1%)
- A smaller percentage who nominated Buddhism (1.1% compared to 2.2%)

# **Emerging groups**

The largest changes in the religious affiliation of the population in Burns Beach between 2016 and 2021 were for those who nominated:

- Anglican (-1,687 persons)
- Western (Roman) Catholic (-654 persons)
- Presbyterian and Reformed (-239 persons)
- Islam (+140 persons)

### Qualifications

Educational Qualifications relate to education outside of primary and secondary school and are one of the most important indicators of socio-economic status. With other data sources, such as **Employment Status**, **Income** and **Occupation**, Burns Beach's Educational Qualifications help to evaluate the economic opportunities and socio-economic status of the area and identify skill gaps in the labour market.

## Dominant groups

Analysis of the highest level of schooling attained by the population in Burns Beach in 2021 compared to Western Australia shows that there was a lower proportion of people who had left school at an early level (Year 10 or less) and a higher proportion of people who completed Year 12 or equivalent.

Overall, 24.1% of the population left school at Year 10 or below, and 60.6% went on to complete Year 12 or equivalent, compared with 27.3% and 56.0% respectively for Western Australia.

The major differences between the level of schooling attained by the population in Burns Beach and Western Australia were:

- A *larger* percentage of persons who completed year 12 or equivalent (60.6% compared to 56.0%)
- A smaller percentage of persons who completed year 8 or below (1.5% compared to 2.7%)
- A smaller percentage of persons who completed year 10 or equivalent (18.7% compared to 19.7%)

## **Emerging groups**

The largest changes in the level of schooling attained by the population in Burns Beach, between 2016 and 2021 were:

- Year 12 or equivalent (+2,846 persons)
- Year 8 or below (+54 persons)

# Education institution attending

The share of Burns Beach's population attending educational institutions reflects the age structure of the population, as it is influenced by the number of children attending school; proximity to tertiary education, which can mean young adults leaving home to be nearer to educational facilities and; the degree to which people are seeking out educational opportunities in adulthood, especially in their late teens and early twenties.

This data is often combined with Age Structure to identify areas with significant university student populations.

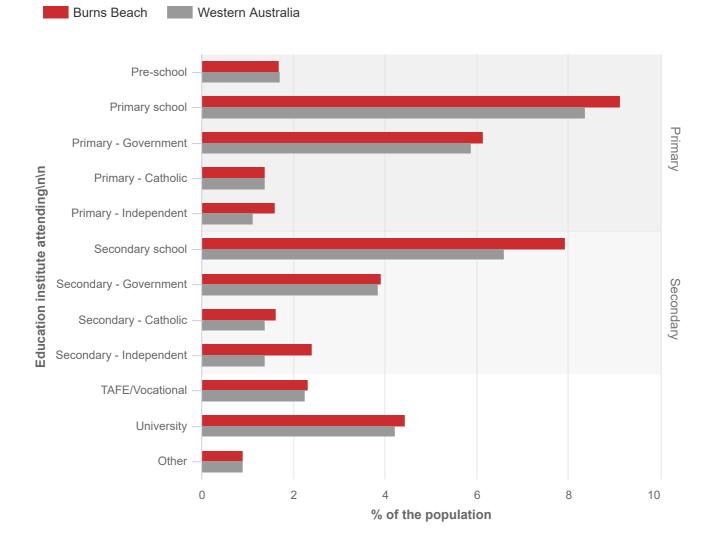

Learn more about planning education provision here.

#### Change in education institution attending, 2016 to 2021

Burns Beach - Total persons

Source: Australian Bureau of Statistics, Census of Population and Housing, 2016 and 2021 (Usual residence data). Compiled and presented in profile.id by .id (informed decisions).

## Dominant groups

Analysis of the share of the population attending educational institutions in Burns Beach in 2021 compared to Western Australia shows that there was a higher proportion attending primary school, a higher proportion attending secondary school, and a similar proportion engaged in tertiary level education.

Overall, 9.1% of the population were attending primary school, 7.9% of the population were attending secondary institutions, and 6.7% were learning at a tertiary level, compared with 8.4%, 6.6% and 6.5% respectively for Western Australia.

The major differences between the share of the population attending learning institutions in Burns Beach and Western Australia were:

- A *larger* percentage of persons attending a secondary school (any type) (7.9% compared to 6.6%)
- A larger percentage of persons attending and independent secondary school (2.4% compared to 1.4%)

# **Emerging groups**

From 2016 to 2021, Burns Beach's population increased by 3,362 people (+8.0%). This represents an average annual change of 1.54% per year over the period.

The largest changes in the number of persons attending education institutions in Burns Beach, between 2016 and 2021 were in those who nominated:

- Primary school (-183 persons)
- Pre-school (+179 persons)
- TAFE/Vocational (+156 persons)
- Secondary school (-112 persons)

### Need for assistance

Burns Beach's disability statistics relate directly to need for assistance due to a severe or profound disability. The information may be used in the planning of local facilities, services such as day-care and occasional care and in the provision of information and support to carers. Burns Beach's disability statistics help in understanding the prevalence of people who need support in the community, and along with information on **Unpaid Care** to a person with a disability, how that support is provided.

Please note: A person's reported need for assistance is based on a subjective assessment and should therefore be treated with caution. See the specific data notes for further detail.

## Dominant groups

Analysis of the need for assistance of people in Burns Beach compared to Western Australia shows that there was a lower proportion of people who reported needing assistance with core activities.

Overall, 3.7% of the population reported needing assistance with core activities, compared with 4.6% for Western Australia.

The major difference in the age groups reporting a need for assistance in Burns Beach and Western Australia is:

• A larger percentage of persons aged 85 and over (50.9% compared to 45.6%)

## **Emerging groups**

The major differences in the age groups reporting a need for assistance between 2016 and 2021 in Burns Beach were in the age groups:

- 85 and over (+138 persons)
- 20 to 59 (+103 persons)
- 80 to 84 (+61 persons)
- 10 to 19 (+58 persons)

The 2021 Census looked for the first time at the level of incidence of selected long-term health conditions in the community. The Census question asked respondents if they have been diagnosed with a specific condition (or other condition) from a list of ten conditions plus "other". Combined, these ten conditions comprise approximately 60% of Australia's deaths, and even those which are not deadly contribute substantially to the burden of disease.

It is well known that socio-economic factors also contribute to morbidity and health outcomes, with lower-socio economic characteristics correlated with higher incidence of some health conditions. The inclusion of this topic in the Census enables these factors to be explored in more detail.

Also, in society, health conditions tend to increase with age. For these reasons, it is recommended that long-term health conditions data for be viewed at in conjunction with age structure, household income, educational qualifications, and need for assistance datasets, along with the SEIFA index of disadvantage.

# **Dominant groups**

Analysis of the long term health conditions of Burns Beach in 2021 compared to Western Australia shows that there was a lower proportion of people with a long-term health condition 28.9% compared to 29.9% in Western Australia.

The major difference between Burns Beach's individual incomes and Western Australia's individual incomes is:

• A *smaller* percentage with arthritis (6.6% compared to 7.6%)

## **Employment status**

Burns Beach's employment statistics are an important indicator of socio-economic status. The levels of full or part-time employment, unemployment and labour force participation indicate the strength of the local economy and social characteristics of the population. Employment status is linked to a number of factors including Age Structure, which influences the number of people in the workforce; the economic base and employment opportunities available in the area and; the education and skill base of the population (Occupations, Industries, Qualifications).

The two most important measures are:

- Unemployment rate the number of people looking for work, as a percentage of the labour force (employed and unemployed over 15)
- Participation rate the labour force expressed as a percentage of the total population over 15

Please note that in the 2021 Census, due to the COVID pandemic and lockdowns in many areas, the proportion of people who were employed but away from work in the week before Census has increased. We have no information on whether these people were normally employed full or part time so this is shown separately.

#### Labour force status

## Dominant groups

The size of Burns Beach's labour force in 2021 was 25,993, of which 8,536 were employed part-time and 14,594 were full time workers.

Analysis of the employment status (as a percentage of the labour force) in Burns Beach in 2021 compared to Western Australia shows that there was a similar proportion in employment, as well as a similar proportion unemployed. Overall, 94.7% of the labour force was employed, and 5.3% unemployed, compared with 94.9% and 5.1% respectively for Western Australia.

Analysis of the labour force participation rate of the population in Burns Beach in 2021 shows that there was a higher proportion in the labour force (71.0%) compared with Western Australia (63.9%).

## **Emerging groups**

Between 2016 and 2021, the number of people employed in Burns Beach showed an increase of 2,500, and the number unemployed showed a decrease of 744. In the same period, the number of people in the labour force showed an increase of 1,756 or 7.2%.

# Industry sector of employment

Burns Beach's industry statistics identify the industry sectors in which the residents work (which may be within the residing area or elsewhere). This will be influenced by the skill base and socio-economic status of the residents as well as the industries and employment opportunities present in the region.

When viewed in conjunction with Residents Place of Work data and Method of Travel to Work, industry sector statistics provide insights into the relationship between the economic and residential role of the area.

## **Dominant groups**

An analysis of the jobs held by the resident population in Burns Beach in 2021 shows the three most popular industry sectors were:

- Health Care and Social Assistance (3,461 people or 14.1%)
- Construction (3,077 people or 12.5%)
- Retail Trade (2,394 people or 9.7%)

In combination, these three industries employed 8,932 people in total or 36.3% of the total employed resident population.

In comparison, Western Australia employed 13.6% in Health Care and Social Assistance; 8.8% in Construction; and 8.8% in Retail Trade.

The major differences between the jobs held by the population of Burns Beach and Western Australia were:

- A *larger* percentage of persons employed in construction (12.5% compared to 8.8%)
- A smaller percentage of persons employed in agriculture, forestry and fishing (0.8% compared to 2.3%)
- A *smaller* percentage of persons employed in mining (6.2% compared to 7.5%)
- A *smaller* percentage of persons employed in transport, postal and warehousing (3.3% compared to 4.5%)

## **Emerging groups**

The number of employed people in Burns Beach increased by 2,501 between 2016 and 2021.

The largest changes in the jobs held by the resident population between 2016 and 2021 in Burns Beach were for those employed in:

- Health Care and Social Assistance (+737 persons)
- Mining (+441 persons)
- Education and Training (+312 persons)
- Professional, Scientific and Technical Services (+296 persons)

# Occupation of employment

Burns Beach's occupation statistics quantify the occupations in which the residents work (which may be within the residing area or elsewhere). This will be influenced by the economic base and employment opportunities available in the area, education levels, and the working and social aspirations of the population. When viewed with other indicators, such as Educational Qualifications and Individual Income, Occupation is a key measure for evaluating Burns Beach's socio-economic status and skill base.

## Dominant groups

An analysis of the jobs held by the resident population in Burns Beach in 2021 shows the three most popular occupations were:

- Professionals (4,707 people or 19.1%)
- Technicians and Trades Workers (4,175 people or 17.0%)
- Clerical and Administrative Workers (3,415 people or 13.9%)

In combination these three occupations accounted for 12,297 people in total or 50.0% of the employed resident population.

In comparison, Western Australia employed 22.0% in Professionals; 15.3% in Technicians and Trades Workers; and 12.1% in Clerical and Administrative Workers.

#### The major differences between the jobs held by the population of Burns Beach and Western Australia were:

- A larger percentage of persons employed as Clerical and Administrative Workers (13.9% compared to 12.1%)
- A larger percentage of persons employed as Technicians and Trades Workers (17.0% compared to 15.3%)
- A *smaller* percentage of persons employed as Professionals (19.1% compared to 22.0%)
- A *smaller* percentage of persons employed as Machinery Operators And Drivers (5.9% compared to 7.7%)

# **Emerging groups**

The number of employed people in Burns Beach increased by 2,502 between 2016 and 2021.

The largest changes in the occupations of residents between 2016 and 2021 in Burns Beach were for those employed as:

- Professionals (+806 persons)
- Community and Personal Service Workers (+612 persons)
- Managers (+447 persons)
- Clerical and Administrative Workers (+354 persons)

### Method of travel to work

Burns Beach's commuting statistics reveal the main modes of transport by which residents get to work. There are a number of reasons why people use different modes of transport to get to work including the availability of affordable and effective public transport options, the number of motor vehicles available within a household, and the distance travelled to work.

Commuting data is very useful in transport planning as it informs decision-makers about the availability, effectiveness and utilisation of local transport options, particularly when analysed with Residents Place of Work data and Car Ownership.

WARNING: Method of travel to work relates to Census day, which for the 2021 Census occurred during COVID-19 lockdowns for large parts of Australia. In lockdown, many occupations were required to work from home if possible, and some industries were closed, so people did not go to work. For this reason, these categories may have increased, with corresponding declines in other methods of travel. Use the data with caution when comparing over time. For more details, please refer to the data notes.

## Dominant groups

In 2021, there were 2,260 people who caught public transport to work (train, bus, tram or ferry) in Burns Beach, compared with 16,450 who drove in private vehicles (car – as driver, car – as passenger, motorbike, or truck).

Analysis of the method of travel to work of the residents in Burns Beach in 2021, compared to Western Australia, shows that 9.2% used public transport, while 65.9% used a private vehicle, compared with 7.4% and 66.7% respectively in Western Australia.

The major differences in persons between the method of travel to work of Burns Beach and Western Australia were:

- A *larger* percentage of persons who travelled by train (8.0% compared to 4.0%)
- A *smaller* percentage of persons who travelled by bus (1.1% compared to 3.3%)
- A *smaller* percentage of persons who walked only (0.8% compared to 2.2%)

# **Emerging groups**

The number of employed people in Burns Beach increased by 2,508 between 2016 and 2021.

The largest changes in the method of travel to work by resident population in Burns Beach between 2016 and 2021 were for those nominated:

- Worked at home (+1,147 persons)
- Car as driver (+1,108 persons)
- Did not go to work (+791 persons)
- Train (-698 persons)

## Disengagement by age

Engagement in employment and education looks at the level of participation by age and sex of the population in the labour market, or full or part-time education. A full time employed or full-time student would be "Fully engaged", while part-time students may be fully engaged if they are also employed, or partly engaged if they are not working. Engagement in the labour and education market is highly dependent on age. Retirees are generally disengaged, while stay-at-home parents are also likely to be disengaged. The rate of engagement, particularly in the younger and working age groups can be affected by access to strong employment and education markets and is a measure of socio-economic status and the level of welfare dependency in an area. For more detail on employment and educational characteristics associated with disengagement, please look at Employment Status, Qualifications and Educational Institution Attending.

## Dominant groups

The number of people aged 15 to 24 years in Burns Beach in 2016 was 6,466, of this, 8.7% were disengaged and 14.4% were partially engaged, compared to 8.8% and 13.0% respectively for Western Australia.

## **Emerging groups**

Between 2016 and 2021, the number of people 15 to 24 years in Burns Beach showed a decrease of -329.

The number of disengaged people aged 15 to 24 years showed a decrease of 90 or 13.8%.

### Volunteer work

The voluntary work sector is an important part of Australia's economy. The level of volunteering can indicate the cohesiveness of the community and how readily individuals are able to contribute to that community. Factors impacting on the level of volunteering in Burns Beach include the Age Structure of the population, the level of Proficiency in English, Income and Education levels.

Volunteer numbers for the 2021 Census declined in many parts of Australia due to lockdowns and COVID-19 distancing measures.

## **Dominant groups**

Analysis of the voluntary work performed by the population in Burns Beach in 2021 compared to Western Australia shows that there was a lower proportion of people who volunteered for an organisation or group.

Overall, 12.1% of the population reported performing voluntary work, compared with 15.9% for Western Australia.

# **Emerging groups**

The number of volunteers in Burns Beach decreased by 658 people between 2016 and 2021.

## Unpaid domestic work

There has been increased interest in identifying, acknowledging and valuing the unpaid work that supports home and community life. The changing amount of time spent on unpaid housework in different Household Types and, particularly the distribution of this work within the household, can indicate the changing roles of males, females and older children in society. The level of unpaid domestic work in Burns Beach may also be related to Household Income, as higher income households are able to outsource some of these tasks.

# **Dominant groups**

Analysis of the unpaid domestic work performed by the population in Burns Beach in 2021 compared to Western Australia shows that there was a lower proportion of persons who performed 15 hours or more of unpaid domestic work per week.

Overall, 19% of the population reported performing 15 hours or more of unpaid domestic work, compared with 20.1% for Western Australia.

The major differences between the share of the population performing unpaid domestic work in Burns Beach and Western Australia were:

- A *larger* percentage of persons who did unpaid domestic work (total) (70.1% compared to 67.9%)
- A *larger* percentage of persons who did less than 5 hours of domestic work (22.7% compared to 20.8%)
- A *larger* percentage of persons who did between 5 and 14 hours of domestic work (28.1% compared to 27.1%)
- A smaller percentage of persons who did 30 hours or more of domestic work (8.0% compared to 8.7%)

# **Emerging groups**

The largest changes in the number of people performing unpaid domestic work in Burns Beach, between 2016 and 2021 were those who:

- Did no unpaid domestic work (+1,922 persons)
- Did unpaid domestic work (+961 persons)
- Between 5 and 14 hours (+929 persons)
- Between 15 and 29 hours (+294 persons)

## Unpaid care

The proportion of people providing unpaid care for the aged and disabled in Burns Beach can be an important indicator of the level of demand for aged care services and facilities by local and state governments. An increasing proportion of carers among the population may indicate inadequate aged care provision, or the need for in-home support, or support for the carers themselves. The level of care provided by individuals is likely to be affected by Household Income, Age Structure and the ethnic makeup of the community (Language Spoken), as well as the sense of community cohesiveness.

## **Dominant groups**

Analysis of the unpaid care provided by the population in Burns Beach in 2021 compared to Western Australia shows that there was a lower proportion of people who provided unpaid care either to family members or others.

Overall, 9.5% of the population provided unpaid care, compared with 10.7% for Western Australia.

# **Emerging groups**

The number of people who provided unpaid assistance to a person with a disability, long term illness or old age in Burns Beach increased by 551 between 2016 and 2021.

## Unpaid childcare

The role of unpaid childcare in Burns Beach is determined by many different factors. For example areas with high levels of unpaid child care may have a dominance of single income families with one significant earner, or there could be a lack of provision of paid child care in the area. The level to which people care for others children can also indicate the role of extended family (eg. grandparents caring for grandchildren, family day care).

The role of unpaid child care is a complex one so this topic should be viewed in conjunction with several others, including Household Type, Employment, Household Income and Educational Attendance.

## Dominant groups

Analysis of the unpaid child care provided by the population in Burns Beach in 2021 compared to Western Australia shows that there was a higher proportion of people who provided unpaid child care either to their own or to other children. Overall, 31.0% of the population provided unpaid child care, compared with 28.5% for Western Australia.

The major difference between the share of the population providing unpaid child care in Burns Beach and Western Australia was:

• A larger percentage who provided unpaid childcare for own child/ren (22.4% compared to 20.5%)

## **Emerging groups**

The number of people who provided unpaid child care for their own and/or other people's children in Burns Beach increased by 301 between 2016 and 2021.

The largest changes in the number of people performing unpaid child care in Burns Beach, between 2016 and 2021 were those who:

- No unpaid child care provided (+2,585 persons)
- Cared for other child/ren (+440 persons)
- Cared for own child/ren (-160 persons)

### Individual income

Individual Income statistics are an indicator of socio-economic status. With other data sources, such as Household Income, Qualifications and Occupation, they help tell the story of the economic opportunities and socio-economic status of Burns Beach. The amount of income an individual receives is linked to a number of factors including employment status, age (as for instance students and retirees often receive a lower income), qualifications and type of employment.

The incomes presented on this page are for the latest Census year only. For comparison of incomes over time, go to Individual Income Quartiles.

#### Weekly individual income, 2021

Total persons

Source: Australian Bureau of Statistics, Census of Population and Housing, 2021 (Usual residence data). Compiled and presented in profile.id by .id (informed decisions).

## Dominant groups

Analysis of individual income levels in Burns Beach in 2021 compared to Western Australia shows that there was a similar proportion of people earning a high income (those earning \$2,000 per week or more) as well as a similar proportion of low income people (those earning less than \$500 per week).

Overall, 15.0% of the population earned a high income, and 30.9% earned a low income, compared with 14.7% and 31.3% respectively for Western Australia.

The major differences between Burns Beach's individual incomes and Western Australia's individual incomes were:

- A *larger* percentage of persons who earned Negative Income/Nil income (9.7% compared to 8.8%)
- A smaller percentage of persons who earned \$400 \$499 (6.0% compared to 7.0%)
- A smaller percentage of persons who earned \$300 \$399 (6.4% compared to 7.1%)

## Individual income quartiles

Burns Beach's income statistics are an indicator of socio-economic status. With other data sources, such as Household Income, Qualifications and Occupation, they help tell the story of the area's economic opportunities and socio-economic status. Individual income levels are not comparable over time because of the influences of economic change such as wage level fluctuations and inflation. The income quartile method is the most objective method of comparing change in the income profile of a community over time.

A detailed explanation of how Individual Income quartiles are calculated and interpreted is available in **specific** data notes.

## **Dominant groups**

Income quartiles allow us to compare relative income-earning capabilities across time. Analysis of the distribution of the population by income quartile in Burns Beach compared to Western Australia shows that there was greater proportion of persons in the highest income quartile and a similar proportion in the lowest income quartile.

## **Emerging groups**

The most significant change in Burns Beach in persons between 2016 and 2021 was in the medium lowest quartile which showed an increase of 1,144 persons.

### Household income

Households form the common 'economic unit' in our society. Burns Beach's Household Income is one of the most important indicators of socio-economic status. With other data sources, such as Qualifications and Occupation, it helps to reveal the economic opportunities and socio-economic status of Burns Beach. It is important to note that income data is not necessarily a measure of wealth. For example, if an area has a large number of retirees this will produce a higher proportion of households with low income but the retirees may have large capital wealth. For this reason, household income should be viewed in conjunction with Age and Household Composition.

The incomes presented on this page are for the latest Census year only. For comparison of incomes over time, go to Household Income Quartiles.

Learn more about the characteristics of low-income households here.

#### Weekly household income, 2021

Source: Australian Bureau of Statistics, Census of Population and Housing, 2021 (Enumerated data). Compiled and presented in profile.id by .id (informed decisions).

### Dominant groups

Analysis of household income levels in Burns Beach in 2021 compared to Western Australia shows that there was a larger proportion of high income households (those earning \$3,000 per week or more) and a lower proportion of low income households (those earning less than \$800 per week).

Overall, 27.2% of the households earned a high income and 14.5% were low income households, compared with 23.0% and 20.2% respectively for Western Australia.

#### The major differences between the household incomes of Burns Beach and Western Australia were:

- A larger percentage of households who earned \$2,500 \$2,999 (8.4% compared to 7.0%)
- A *larger* percentage of households who earned \$3,000 \$3,499 (7.8% compared to 6.5%)
- A larger percentage of households who earned Not stated (10.9% compared to 9.6%)
- A smaller percentage of households who earned \$400 \$499 (3.1% compared to 5.2%)

## Household income quartiles

Households form the common 'economic unit' in our society. Household Income is one of the most important indicators of socio-economic status. With other data sources, such as Qualifications and Occupation, it helps to reveal Burns Beach's socio-economic status and economic opportunities. Household income levels are not comparable over time because of the influences of economic change such as wage level fluctuations and inflation. The income quartile method is a powerful and objective way of looking at income data and in particular, how it is changing.

A detailed explanation of how Household Income quartiles are calculated and interpreted is available in **specific** data notes.

## **Dominant groups**

Income quartiles allow us to compare relative income-earning capabilities across time. Analysis of the distribution of households by income quartile in Burns Beach compared to Western Australia shows that there was greater proportion of households in the highest income quartile and a lesser proportion in the lowest income quartile.

## **Emerging groups**

The most significant change in Burns Beach between 2016 and 2021 was in the medium lowest quartile which showed an increase of 428 households.

## Equivalised household income

While **Household Income** is a useful measure, it is difficult to tell if changes over time and between geographic areas are due to actual changes in income levels, or due to changes in household size and composition. For example, an increase in lower income households could be due to job losses in key economic sectors, or simply due to decreasing household size as adult children leave home.

Equivalised Household Income puts all households on an equal footing independent of household size and composition to enable a true comparison between areas and over time. It is an indicator of the income resource available to a household of standard size and is the best measure of the changing economic fortunes of households living in Burns Beach.

A detailed explanation of how Equivalised Household Income quartiles are calculated and interpreted is available in specific data notes.

## Dominant groups

Equivalised income quartiles allow us to compare relative income-earning capabilities across time. Because the data is equivalised, households of different size and composition are placed on an equal footing.

Analysis of the distribution of households by income quartile in Burns Beach compared to Western Australia shows that there was a greater proportion of households in the highest equivalised income quartile, and a lesser proportion in the lowest equivalised income quartile.

## **Emerging groups**

The most significant change in Burns Beach between 2016 and 2021 was in the highest quartile which showed an increase of 471 households.

## Household type

Burns Beach's household and family structure is one of the most important demographic indicators. It reveals the area's residential role and function, era of settlement and provides key insights into the level of demand for services and facilities as most are related to age and household types.

To continue building the story, Burns Beach's Household Summary should be viewed in conjunction with Households with Children, Households without Children, Household Size, Age Structure and Dwelling Type.

#### Change in household type, 2016 to 2021

**Burns Beach** 

Source: Australian Bureau of Statistics, Census of Population and Housing, 2016 and 2021 (Enumerated data). Compiled and presented in profile.id by .id (informed decisions).

## Dominant groups

Analysis of the household/family types in Burns Beach in 2021 compared to Western Australia shows that there was a higher proportion of couple families with child(ren) as well as a higher proportion of one-parent families. Overall, 39.6% of total families were couple families with child(ren), and 12.5% were one-parent families, compared with 30.2% and 10.0% respectively for Western Australia.

There were a lower proportion of lone person households and a similar proportion of couples without children. Overall, the proportion of lone person households was 16.4% compared to 23.8% in Western Australia while the proportion of couples without children was 25.5% compared to 25.4% in Western Australia.

## **Emerging groups**

The number of households in Burns Beach increased by 1,355 between 2016 and 2021.

The largest changes in family/household types in Burns Beach between 2016 and 2021 were:

- Lone person (+600 households)
- Couples without children (+599 households)
- One parent families (+225 households)

#### Households with children

Households with Children require different services and facilities than other household types, and their needs change as both adults and children age. When many families in an area are at the same stage in their individual lifecycles, it creates a suburb lifecycle. Knowing where a suburb is in a cycle of change helps planners make evidence-based decisions about the demand for services both now and in the future.

For Households with Children in Burns Beach, life stage is based on the age of children in the household. The age of the parent(s) is not taken into account.

- Young children: Children aged under 15 only
- **Mixed age children:** One or more children under 15 and one or more children over 15 (must have 2 or more children)
- Older children: Children aged 15 and over only

To continue building the story, Burns Beach's Household data should be viewed in conjunction with **Household** Size, Age Structure and Dwelling Type.

**Burns Beach** 

Source: Australian Bureau of Statistics, Census of Population and Housing, 2016 and 2021 (Enumerated data). Compiled and presented in profile.id by .id (informed decisions).

## Dominant groups

Analysis of the families with children in Burns Beach in 2021 compared to Western Australia shows that there was a larger proportion of couples with young children, as well as a larger proportion of couples with older children.

Overall, 19.2% of total households with children were couple with young children, and 14.5% were couples with older children, compared with 17.1% and 8.8% respectively for Western Australia.

There were a larger proportion of single parent households with young children and a larger proportion of single parent households with older children. Overall, the proportion of single parent households with young children was 4.5% compared to 3.9% in Western Australia while the proportion of single parent households with older children was 6.2% compared to 4.8% in Western Australia.

## **Emerging groups**

Between 2016 and 2021, the number of households with children increased by 272 households or 3.3%.

The largest changes in households with children in this area between 2016 and 2021 were:

- Single parents with older children (+136 households)
- Couples with older children (+113 households)
- Couples with mixed-age children (-77 households)

#### Households without children

Households without Children include couples without children and lone person households. They require different services depending on the age of the people in the households. For example young couples who have not had children (yet) compared to older "empty nester" couples whose children may have left home.

For Households without Children in Burns Beach, life stage is based on the age of the household reference person (usually person 1 on the Census form):

Young: Aged 15-44Middle-aged: Aged 45-64Older: Aged 65 and over

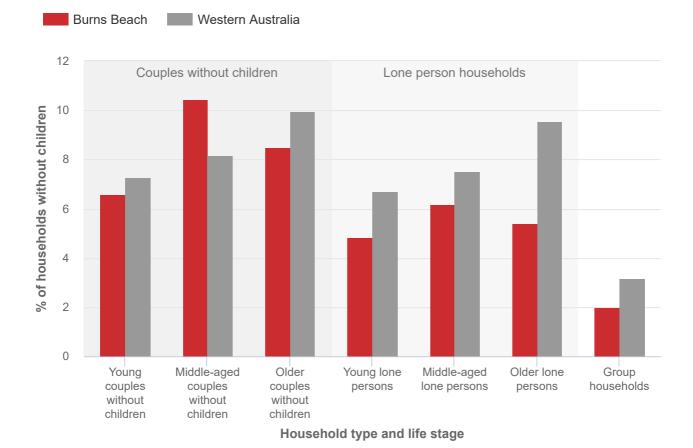

To continue building the story, Burns Beach's Household data should be viewed in conjunction with **Household** Size, Age Structure and Dwelling Type.

#### Change in households without children, 2016 to 2021

**Burns Beach** 

Source: Australian Bureau of Statistics, Census of Population and Housing, 2016 and 2021 (Enumerated data). Compiled and presented in profile.id by .id (informed decisions).

## Dominant groups

Analysis of the households without children in Burns Beach in 2021 compared to Western Australia shows that there was a smaller proportion of young couples without children, a larger proportion of middle-aged couples without children, and a smaller proportion of older couples without children.

In addition, there were a smaller proportion of young lone person households, a smaller proportion of middle-aged lone person households, and a smaller proportion of older lone person households.

## **Emerging groups**

Between 2016 and 2021, the number of households without children increased by 1,195.

The largest changes in households without children in Burns Beach, between 2016 and 2021 were:

- Older couples without children (+392 persons)
- Older lone persons (+324 persons)
- Middle-aged couples without children (+267 persons)
- Middle-aged lone persons (+221 persons)

#### Household size

The size of households in general follows the life-cycle of families. Households are usually small at the stage of relationship formation (early marriage), and then increase in size with the advent of children. They later reduce in size again as these children reach adulthood and leave home. Household size can also be influenced by a lack (or abundance) of affordable housing. Overseas migrants and indigenous persons often have a tradition of living with extended family members which significantly affects household size.

Household size in Australia has generally declined since the 1970s, but the rate of decline has slowed in recent years.

An increasing household size in an area may indicate a lack of affordable housing opportunities for young people, an increase in the birth rate or an increase in family formation in the area. A declining household size may indicate children leaving the area when they leave home, an increase in retirees settling in the area, or an attraction of young singles and couples to the area.

For greater insight, Burns Beach's Household Size data should be viewed in conjunction with Household Summary, Age Structure, Dwelling Type, Household Income and Language Spoken at Home.

## Dominant groups

Analysis of the number of persons usually resident in a household in Burns Beach compared with Western Australia shows that there were a lower proportion of lone person households, and a higher proportion of larger households (those with 4 persons or more). Overall there were 16.9% of lone person households, and 30.9% of larger households, compared with 25.4% and 25.2% respectively for Western Australia.

#### The major differences in the household size for Burns Beach and Western Australia were:

- A larger percentage of households with 4 persons usually resident (20.1% compared to 15.9%)
- A larger percentage of households with 3 persons usually resident (19.6% compared to 15.9%)
- A larger percentage of households with 5 persons usually resident (7.8% compared to 6.4%)
- A smaller percentage of households with 1 person usually resident (16.9% compared to 25.4%)

## **Emerging groups**

The number of households in Burns Beach increased by 1,464 between 2016 and 2021.

The largest changes in the number of persons usually resident in a household in Burns Beach between 2016 and 2021 were:

- 2 persons (+717 households)
- 1 person (+603 households)
- 3 persons (+221 households)

## Family blending

Information on blended and intact families can be an indicator of the level of family breakup and repartnering within the area, and a potential indicator of socio-economic disadvantage. Family blending only applies to couple families with children. For information more broadly about household and family types, including single-parent families, please see Household Type, Households with Children, and Households without Children.

## Dominant groups

Analysis of the family blending in Burns Beach in 2021 compared to Western Australia shows that there was a similar proportion of step families as well as a similar proportion of blended families. Overall, 14.0% of total couple families with children were step families, and 3.9% were blended families, compared with 13.5% and 3.8% respectively for Western Australia.

There were a similar proportion of other families and a similar proportion of couples without children. Overall, the proportion of other families was 0.4% compared to 0.6% in Western Australia while the proportion of intact families was 81.8% compared to 82.2% in Western Australia.

## **Emerging groups**

The number of couple families with children in Burns Beach increased by 40 between 2016 and 2021.

The largest changes in family blending in Burns Beach between 2016 and 2021 were:

- Step family (+444 couples with children)
- Intact Family (-395 couples with children)

## Dwelling type

Dwelling Type is an important determinant of Burns Beach's residential role and function. A greater concentration of higher density dwellings is likely to attract more young adults and smaller households, often renting. Larger, detached or separate dwellings are more likely to attract families and prospective families. The residential built form often reflects market opportunities or planning policy, such as building denser forms of housing around public transport nodes or employment centres.

Dwelling Type statistics should be viewed in conjunction with Household Size, Household Types, Housing Tenure and Age Structure for a more complete picture of the housing market in Burns Beach.

If you're looking at this data to prepare a housing strategy, learn more here.

#### Change in dwelling structure, 2016 to 2021

**Burns Beach** 

Source: Australian Bureau of Statistics, Census of Population and Housing, 2016 and 2021 (Enumerated data). Compiled and presented in profile.id by .id (informed decisions).

## Dominant groups

In 2021, there were 15,552 separate houses in the area, 1,381 medium density dwellings, and 277 high density dwellings.

Analysis of the types of dwellings in Burns Beach in 2021 shows that 90.2% of all dwellings were separate houses; 8.0% were medium density dwellings, and 1.6% were in high density dwellings, compared with 77.1%, 15.9%, and 4.8% in the Western Australia respectively.

In 2021, a total of 94.0% of the dwellings in Burns Beach were occupied on Census night, compared to 89.5% in Western Australia. The proportion of unoccupied dwellings was 5.9%, which is smaller compared to that found in Western Australia (10.3%).

## **Emerging groups**

The total number of dwellings in Burns Beach increased by 834 between 2016 and 2021.

The largest changes in the type of dwellings found in Burns Beach between 2016 and 2021 were:

- Separate house (+1,166 dwellings)
- Medium density (-410 dwellings)
- High density (+88 dwellings)

## Number of bedrooms per dwelling

The Number of Bedrooms in a dwelling is an indicator of the size of dwellings, and when combined with **Dwelling** Type information, provides insight into the role Burns Beach plays in the housing market. For example, an area of high density dwellings that are predominantly 1-2 bedroom are likely to attract students, single workers and young couples, whereas a high density area with dwellings that are predominantly 2-3 bedroom may attract more empty nesters and some families.

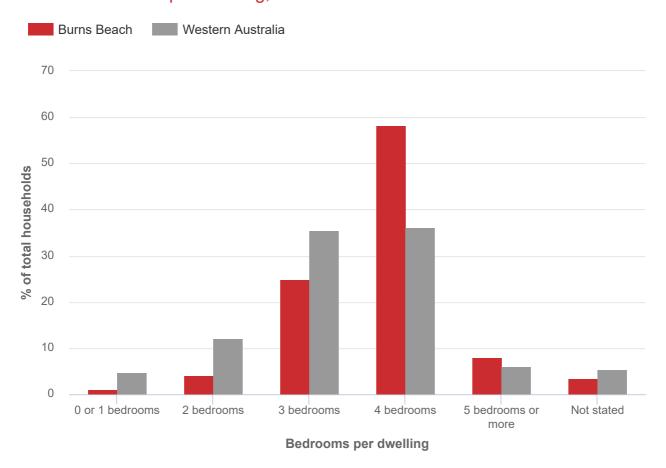

In combination with Household Type and Household Size, the Number of Bedrooms can also indicate issues around housing affordability, overcrowding and other socio-economic factors.

## Number of bedrooms per dwelling

## Dominant groups

Analysis of the number of bedrooms in dwellings in Burns Beach in 2021 compared to Western Australia shows that there was a lower proportion of dwellings with 2 bedrooms or less, and a higher proportion of dwellings with 4 or more bedrooms.

Overall, 5.4% of households were in dwellings with 2 bedrooms or less, and 66.3% of 4 or more bedroom dwellings, compared with 16.9% and 42.2% for Western Australia respectively.

The major differences between the number of bedrooms per dwelling of Burns Beach and Western Australia were:

- A *larger* percentage of 4 bedroom dwellings (58.4% compared to 36.2%)
- A smaller percentage of 3 bedroom dwellings (24.9% compared to 35.5%)
- A *smaller* percentage of 2 bedroom dwellings (4.2% compared to 12.1%)
- A smaller percentage of dwellings with 1 or no bedrooms (includes bedsitters) (1.2% compared to 4.8%)

## **Emerging groups**

The largest changes in the number of bedrooms per dwelling in Burns Beach between 2011 and 2021 were:

- 4 bedrooms (+1,235 dwellings)
- 3 bedrooms (+846 dwellings)
- 5 bedrooms or more (+364 dwellings)
- 2 bedrooms (+171 dwellings)

#### Internet connection

Please note: For the 2021 Census, the ABS dropped the question regarding household internet connection. This page shows data for the 2016 and previous Censuses only.

An internet connection is now an important utility for most households in Australia. It is increasingly required for accessing essential information and taking part in the digital economy. Australia-wide in 2016, nearly 80% of all households had internet access. However, this decreases with age – seniors are less likely to have internet access at home. The lack of internet access is likely to indicate a level of disadvantage and could be related to socioeconomic factors, age, or geographical isolation.

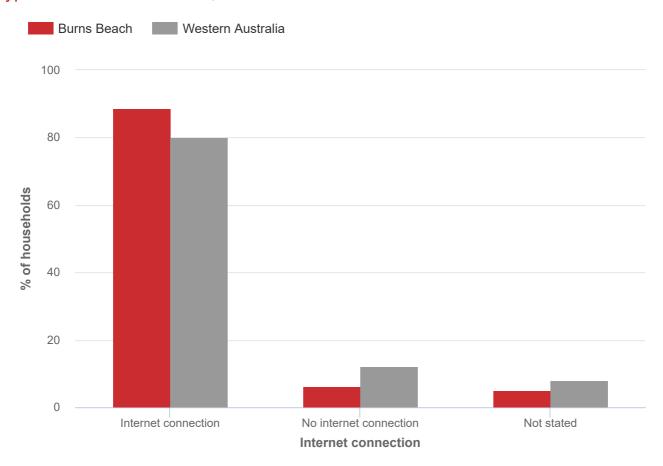

Internet connectivity in Burns Beach should be looked at in conjunction with Household Type and Age Structure, as well as Education Levels.

## Type of internet connection

| Burns Beach - Households | 2016   |       |                           |        | Change |                           |                 |

## **Dominant groups**

Analysis of the type of internet connection of households in Burns Beach compared to Western Australia shows that there was a higher proportion of households with an internet connection

Overall 88.7% of households had an internet connection, compared with 80.1% in Western Australia.

## **Emerging groups**

Between 2011 and 2016 the number of households with an internet connection increased by 1,660.

## Number of cars per household

The ability of the population to access services and employment is strongly influenced by access to transport. The number of motor vehicles per household in Burns Beach quantifies access to private transport and will be influenced by Age Structure and Household Type, which determine the number of adults present; access to Public Transport; distance to shops, services, employment and education; and Household Income. Depending on these factors, car ownership can be seen as a measure of advantage or disadvantage, or a neutral socio-economic measure, which impacts on the environment and quality of life.

## Car ownership

**Burns Beach** 

Source: Australian Bureau of Statistics, Census of Population and Housing, 2016 and 2021 (Enumerated data). Compiled and presented in profile.id by .id (informed decisions).

## Dominant groups

Analysis of the car ownership of the households in Burns Beach in 2021 compared to Western Australia shows that 93.9% of the households owned at least one car, while 2.7% did not, compared with 89.8% and 4.8% respectively in Western Australia.

Of those that owned at least one vehicle, there was a smaller proportion who owned just one car; a larger proportion who owned two cars; and a larger proportion who owned three cars or more.

Overall, 28.7% of the households owned one car; 41.8% owned two cars; and 23.4% owned three cars or more, compared with 33.2%; 37.0% and 19.5% respectively for Western Australia.

### **Emerging groups**

The largest changes in the household car ownership in Burns Beach between 2016 and 2021 were:

- 1 motor vehicle (+698 households)
- 2 motor vehicles (+658 households)
- 3 or more motor vehicles (+198 households)
- No motor vehicles (+61 households)

## Housing tenure

Burns Beach's Housing Tenure data provides insights into its socio-economic status as well as the role it plays in the housing market. For example, a high concentration of private renters may indicate a transient area attractive to young singles and couples, while a concentration of home owners indicates a more settled area with mature families and empty-nesters (Household Summary). Tenure can also reflect built form (Dwelling Type), with a significantly higher share of renters in high density housing and a substantially larger proportion of home-owners in separate houses, although this is not always the case.

In conjunction with other socio-economic status indicators in Burns Beach, Tenure data is useful for analysing housing markets, housing affordability and identifying public housing areas.

#### Change in housing tenure, 2016 to 2021

**Burns Beach** 

Source: Australian Bureau of Statistics, Census of Population and Housing, 2016 and 2021 (Enumerated data). Compiled and presented in profile.id by .id (informed decisions).

## Dominant groups

Analysis of the housing tenure of households of Burns Beach in 2021 compared to Western Australia shows that there was a smaller proportion of households who owned their dwelling; a larger proportion purchasing their dwelling; and a smaller proportion who were renters.

Overall, 22.0% of households owned their dwelling; 52.2% were purchasing, and 21.6% were renting, compared with 28.3%, 37.6% and 26.4% respectively for Western Australia.

## **Emerging groups**

The largest changes in housing tenure categories for the households in Burns Beach between 2016 and 2021 were:

- Fully owned (+890 households)
- Mortgage (+606 households)

The total number of households in Burns Beach increased by 1,352 between 2016 and 2021.

## Housing loan repayments

Mortgage repayments are directly related to house prices in Burns Beach, length of occupancy and the level of equity of home owners. When viewed with Household Income data it may also indicate the level of housing stress households in the community are under. In mortgage belt areas it is expected that households will be paying a higher proportion of their income on their housing compared to well-established areas. First home buyer areas are also likely to have larger mortgages than upgrader areas where households move in with equity from elsewhere.

Mortgage payment levels are not directly comparable over time because of inflation. For comparison of mortgage payments over time, go to Housing Loan Quartiles.

Further reading: How can Councils influence affordable housing.

#### Monthly housing loan repayments, 2021

Source: Australian Bureau of Statistics, Census of Population and Housing, 2021 (Enumerated data). Compiled and presented in profile.id by .id (informed decisions).

## Dominant groups

Analysis of the monthly housing loan repayments of households in Burns Beach compared to Western Australia shows that there was a larger proportion of households paying high mortgage repayments (\$2,600 per month or more), and a smaller proportion of households with low mortgage repayments (less than \$1,200 per month).

Overall, 24.4% of households were paying high mortgage repayments, and 16.1% were paying low repayments, compared with 21.8% and 19.6% respectively in Western Australia.

The major differences between the household loan repayments of Burns Beach and Western Australia were:

- A larger percentage of \$3,000-\$3,999 (10.0% compared to 8.5%)
- A *larger* percentage of \$2,600-\$2,999 (8.1% compared to 6.9%)
- A *smaller* percentage of \$600 \$999 (5.1% compared to 6.5%)
- A smaller percentage of \$1,200 \$1,399 (6.6% compared to 7.7%)

## Housing loan quartiles

Mortgage repayments in Burns Beach are directly related to house prices, length of occupancy and the level of equity of home owners. When viewed with **Household Income** data it may also indicate the level of housing stress in the community.

The quartile method is the most objective method of comparing change in the mortgage payment profile of a community over time.

A detailed explanation of how Housing Loan Repayment quartiles are calculated and interpreted is available in specific data notes.

#### Change in housing loan quartiles, 2016 to 2021

**Burns Beach** 

Source: Australian Bureau of Statistics, Census of Population and Housing, 2016 and 2021 (Enumerated data). Compiled and presented in profile.id by .id (informed decisions).

## Dominant groups

Housing loan repayment quartiles allow us to compare relative repayment liabilities across time. Analysis of the distribution of households by housing loan repayment quartiles in Burns Beach compared to Western Australia shows that there was a larger proportion of households in the highest repayment quartile, and a smaller proportion in the lowest repayment quartile.

## **Emerging groups**

The total number of households with a mortgage in Burns Beach decreased by 7,564 between 2016 and 2021. The most significant change in Burns Beach during this period was in the medium lowest quartile which showed an increase of 150 households.

## Housing rental payments

Rental payments can be a better measure of the cost of housing in Burns Beach than mortgage repayments because they are not contingent on length of occupancy or equity in the dwelling.

High rental payments may indicate desirable areas with mobile populations who prefer to rent, or a housing shortage, or gentrification. Low rental payments may indicate public housing (check **Tenure Type**), or areas where low income households move by necessity for a lower cost of living.

Rental payments are not directly comparable over time because of inflation. For comparison of rental payments over time, go to Housing Rental Quartiles.

#### Weekly housing rental payments, 2021

Source: Australian Bureau of Statistics, Census of Population and Housing, 2021 (Enumerated data). Compiled and presented in profile.id by .id (informed decisions).

## **Dominant groups**

Analysis of the weekly housing rental payments of households in Burns Beach compared to Western Australia shows that there was a larger proportion of households paying high rental payments (\$450 per week or more), and a smaller proportion of households with low rental payments (less than \$250 per week).

Overall, 24.7% of households were paying high rental payments, and 8.7% were paying low payments, compared with 19.4% and 21.6% respectively in Western Australia.

The major differences between the housing rental payments of Burns Beach and Western Australia were:

- A larger percentage of \$350-\$399 (24.4% compared to 16.0%)
- A *larger* percentage of \$400-\$449 (16.3% compared to 11.2%)
- A smaller percentage of \$250-\$299 (5.8% compared to 11.2%)
- A smaller percentage of \$200-\$249 (2.9% compared to 7.2%)

## Housing rental quartiles

Rental payments in Burns Beach are indicative of its residential role and function and are directly related to the value of residential property. When viewed with **Household Income** data they may also indicate the level of 'housing stress' in the community.

The quartile method is the most objective method of comparing change in the rental costs of a community over time.

A detailed explanation of how Housing Rental Payment quartiles are calculated and interpreted is available in specific data notes.

## **Emerging groups**

The total number of households renting their dwelling in Burns Beach increased by 5 between 2016 and 2021. The most significant change during this period was in the medium lowest quartile which showed an increase of 122 households.

## Western Australia

## Residential building approvals

The Western Australia Parliamentary Library's building approvals are used as a leading indicator of the general level of residential development, economic activity, employment and investment. Residential building activity depends on many factors that vary with the state of the economy including interest rates, availability of mortgage funds, government spending, and business investment. Large financial changes or shocks, such as the Global Financial Crisis of 2008/09 can be observed in the data. However, the number of building approvals can fluctuate substantially from year to year simply as a result of the short-term nature of many construction projects, and the cyclical nature of the industry.

## Western Australia

## About the community profile

Demographic change across Australia is recorded by the Australian Bureau of Statistics (ABS) in the Census collections every five years. Population experts .id (informed decisions) analyse and convert these raw figures into stories of place to inform council staff, community groups, investors, business, students and the general public.

The Western Australia Parliamentary Library Electorate Profiles provides demographic analysis for the State and its suburbs based on results from the 2016, 2011, 2006, 2001, 1996 and 1991 Censuses of Population and Housing. The profile is updated with population estimates when the Australian Bureau of Statistics (ABS) releases new figures such as the annual Estimated Resident Population (ERP).

Suburb boundaries and Census questions change over time, but .id manages the data to ensure that there is an accurate time series provided for the current geographic boundaries. You can read more about this in the Geography Notes section.

Results for the Western Australia Parliamentary Library include population, age structure, ethnicity, ancestry, religion, income, qualifications, occupations, employment, unemployment, disability, disadvantage, volunteering, childcare, family structure, household structure, housing tenure, mortgage and rental payments, and the size and type of the dwellings people live in.

The Community Profile presents this information in clear maps, tables and charts with concise factual commentary to answer three important questions:

- 1. What are the characteristics of the people who live here?
- 2. How are they changing?
- 3. How do they compare to other areas?

This provides the basis for making evidence-based decisions about how to provide services for the community as it changes.

You can be confident about the quality of the information as it is derived from Australian Bureau of Statistics data, analysed and presented by population experts and funded by the Western Australia Parliamentary Library.
