Subject: renewable energy inquiry

Mr Mark Warner
Committee Clerk
Standing Committee on Environment and Public Affairs Committee

Dear Mark

The Sustainable Energy Association of Australia Inc. is in support of an Legislative Council inquiry into renewable energy in Western Australia, in particular on the issues of:

- a fair price for the export of distributed energy (a feed-in tariff);
- the scope and conditions of access to schemes in relation of the sale of distributed energy to the grid;
- administrative and policy processes to ensure a consistent and stable policy environment for renewable energy businesses to operate within in Western Australia; and
- strategies for Western Australia to meet 20% renewable generation by 2020 target, and for regions to develop renewable generation appropriate to their geographic location and needs.

SEA, as a representative organisation for both sustainable energy businesses and customers considers these matter to be very important for all parts of the market place inclusive of consumers. SEA would welcome the opportunity to provide evidence in the form of written submissions or oral testimony to the Committee, and contribute to briefings and other activities.

Should you have any questions, please do not hesitate to contact me.

regards, Ray Wills
