

LEGISLATIVE COUNCIL
Question Without Notice

Tuesday, 14 March 2023

C236. Hon Dr Brad Pettitt to the Leader of the House representing the Minister for Planning

I refer to the Premier's reference to "priority infill location" in a West Australian article (<https://thewest.com.au/business/property/major-barrier-to-apartment-construction-set-to-ease-through-new-80m-infrastructure-development-fund--c-9822194>) published on 22 February 2023, and I ask:

1. What are the priority infill locations in the Perth metro-area?
2. How has the State Government defined "priority infill location"?
3. Is there a map or other document in which these areas are outlined?
 - a. If yes, please table these documents.

Answer

- 1-3. The locations identified for the urban infill stream of the Infrastructure Development Fund are contained within its publicly available guidelines.

For the Member's convenience, a copy of these is now tabled.

2. About the Infrastructure Development Fund

[illegible][illegible]

Abstract The purpose of this study was to determine the effect of a 12-week, low-intensity, supervised walking program on the physical and psychological health of sedentary, middle-aged women. The study was a randomized, controlled trial. The subjects were 40 women, 40 to 55 years of age, who were sedentary and had no history of cardiovascular disease. The subjects were randomly assigned to either a supervised walking program or a control group. The walking program consisted of 12 weeks of walking, 3 times per week, for 30 minutes per session. The control group consisted of 20 women who did not participate in the walking program. The subjects were assessed at baseline and at 12 weeks. The walking program had a significant positive effect on the physical and psychological health of the subjects. The walking program significantly improved the subjects' physical fitness, as measured by the 6-minute walk test, and their psychological health, as measured by the Beck Depression Inventory. The walking program also significantly improved the subjects' quality of life, as measured by the SF-36. The walking program had no significant effect on the subjects' weight, blood pressure, or cholesterol levels. The results of this study suggest that a 12-week, low-intensity, supervised walking program can improve the physical and psychological health of sedentary, middle-aged women.
